Wireless Smart Pull Handle Set for Single Doors, 600mm

Can be unlocked by use of keypad, Mifare card or fingerprint reader - Wireless handle connection

The Electronic door pull handle for timber and glass doors is completely wire free from the door to the frame. The handle set is battery powered with wire free communication to the controller which can be located up to two meters away from the door. Constructed from aluminum with black high gloss reader and keypad, the user is able to choose

between biometric or card reader or keypad with a request to exit button built into the internal handle.

The pull handle is available in various lengths with both timber and a glass door mounting kit. The unit is simple to install and easy to program offering the user a quick and simple access control solution. The double door set is complete with the access control pull handle and dummy pull handle for the other door leaf. For added assurance if the batteries lose power you can plug in your mobile phone or power bank via a mini USB cable to offer temporary power-up to open the door.
